

SmartList To Go®

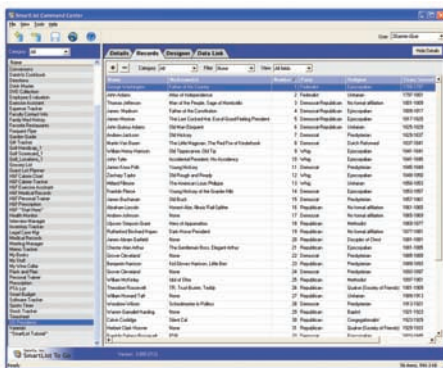

The #1 Selling Access & Database Tool for Handhelds.

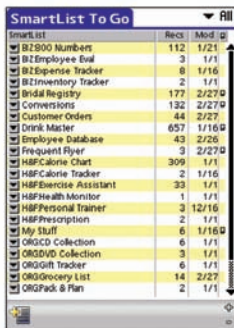

Create & Manage Databases On Your Handheld

SmartList To Go Allows You to Create, View and Manage Databases on Your Handheld. You can even synchronize directly with Microsoft Access. Easily track inventory, instantly fulfill sales orders or quickly reference a customer database – all while on the go. SmartList To Go is completely customizable and equipped with the necessary tools to help you create a simple list or a complex and colorful form. It is a must-have for experienced database users, but simple enough for the novice. Be more productive, more efficient, more informed and simply do more real work on your handheld.

DESKTOP APPLICATION

HANDHELD APPLICATION

Store More – Use expansion cards to save your valuable handheld memory.

Sync with Microsoft Access – Select, add and link your Access databases from the desktop and bi-directional synchronization will keep them up-to-date at the office and out in the field.

Import Your Data – Whether your information is in an Excel spreadsheet or a text file, you can easily import data from other programs and use our included desktop database application to take it with you.

Design & Create – Your very own databases and customized handheld forms can be designed with ease. Our Smart Creation Wizards make set up simple and straightforward.

Upload & Download – 100's of free ready-to-use database templates are included and available online to help you get started. You can even create and share your own.

View More – New handheld and hi-res screen support helps display and organize information clearly.

Do More – Design, view, filter, sort & categorize all your important data in ways no other program can!

Easy Enough for the Novice Database User

What is a Database?

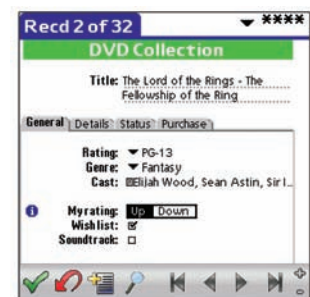

Databases allow you to organize information smartly so you can easily sort, view and filter data to provide an instant status report. Why use a database instead of a spreadsheet or Word document? So you can use tools like forms, drop down lists, radio buttons and checkboxes to easily track and manage information.

Example:

Wouldn't you love to have an up-to-the minute record of all the CDs, DVDs, or MP3s you own? You can then sort through your collection by author, title, songs - even keep notes and mark your favorites. You can also track who has borrowed what to ensure your collection always stays up-to-date.

Key Features for New Users:

- Smart Database & Form Creation Wizards (Handheld & Desktop)
- In-Product Help, Online Tutorials & Support
- Easy Import of Existing Data from Other Programs
- Hundreds of Templates Available to Help You Get Started
- Complete Stand-Alone Desktop Database Application Included

Powerful Enough for the Experienced Database User

More Than Your Standard Flat Database

SmartList To Go® synchronizes directly with Microsoft® Access and can import data from other sources. It supports multiple views and filters, powerful sorting, plus record & database level categories. You can even join databases together to create related, integrated applications plus easily design customized handheld forms and run specified reports all on your handheld.

Example:

Why not set up a company database in Access, and then design and deploy a handheld form for your employees to update when out in the field? Then wirelessly sync the handhelds with a centralized database and have everything entered and running before they even get back to the office. This is exactly what many SmartList To Go customers do every day to help fuel their efficiency and productivity.

Key Features for Experienced Users:

- Bi-directional Access Synchronization
- Fully Customizable Handheld Form Design
- Multiple View, Filter, Category, Report and Sort Options
- 6 Levels of Password Protection
- 24 Different Field Types
- 60,000 Records per Database
- 200 Databases per Handheld
- Advanced Expression and Plug-in Capabilities

Awards & Customer Quotes

"I have been using Microsoft® Access since it first came out. SmartList was the perfect answer to making Access mobile!" – John M.

"It is the single most powerful application I own, and I would choose it over any other application if I had to pick just one." – Marc C.

"I must have not just ANY database, but SmartList To Go. Ease of use, reliability, and overall software capability are the reasons why." – Derek W.
